

Using Zoom with the classroom computer

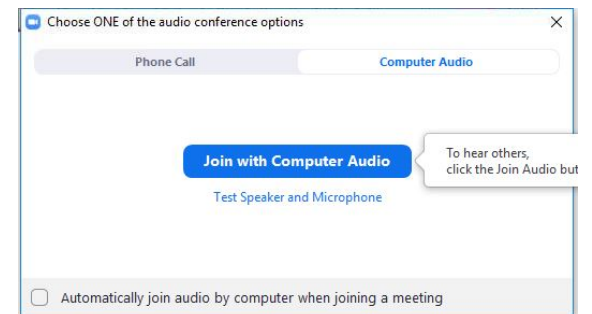

- 1) Launch Panopto using the Lecture Capture button on the Applauncher, select Recorder, don't login, then minimize it so that Remote Recorder will 'release' the input devices needed for Zoom.

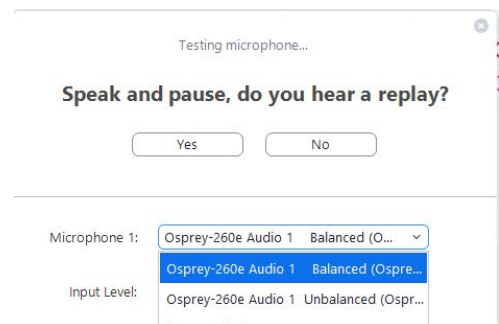

- 2) Turn on the document camera and select that with your classroom controls on from the Applauncher.

- 3) Open a browser, go to Blackboard and join your meeting.
- 4) Follow the directions and launch the Zoom client.
- 5) Once the local client launches be sure to select 'Test Computer Mic & Speakers'
- 6) For the speaker the default should be: 'Speakers...' this is so you can hear far-side audio in the classroom.

- 7) For the microphone selection, choose: 'Osprey Balanced...' finish the testing

- 8) Then select 'Join with Computer Audio', then again, 'Join with Computer Audio'
- 9) Then choose a video input: DocCam will be AV.io HD (the image may appear reversed to you, but it won't to the students attending)

- 10) Now Start Video

- 11) At the end of class: Leave the meeting and close everything out.
